Cialis Daily

Cialis Daily offers a continuous, low-dose tadalafil treatment approach, taken once per day, designed to enable readiness for sexual activity at any time for men with erectile dysfunction, and/or to alleviate urinary symptoms associated with an enlarged prostate. Its regimen aims for consistent therapeutic levels rather than on-demand dosing.

Description

Millions of men across the world struggle with erectile dysfunction and similar problems. For some guys their problem is caused by stress, whereas for others it is a serious issue that they cannot overcome without using medications such as Cialis. In fact, some studies conclude that when it is used on a daily basis, Cialis is more effective for treating chronic ED. But before you consider this option, there are some important things that you should know, starting with the dosage. **RECOMMENDED DOSAGE** Cialis is available in dosages that range between 2.5 and 20 mg. The 20 mg and 10 mg tablets are what most men take right before they engage in sexual intercourse, but Cialis 2.5 mg and 5 mg are the appropriate doses for daily use. If you intend to use the pill every day, it is important to seek your doctor's opinion on the right dosage. Although most will start you off with the smallest dose of 2.5 mg, sometimes it might be necessary to increase it to 5 mg. **HOW TO TAKE CIALIS FOR DAILY USE** The most important thing to do when taking Cialis on a daily basis is to follow your doctor's directions. Take only one pill per day, and if you skip a dose, take it as soon as possible, but make sure you that you only take one tablet every day. You can take it after a meal, but you can also take it outside of meals. However, remember to avoid drinking excessive amounts of alcohol because it will reduce the effectiveness of the drug. Also, there are no stipulations on the time of day when to take the drug. However, it is best to take the drug every day at approximately the same time. Some men will see results after as few as several days of use, but in most instances it may take up to a few weeks for the drug to take effect. Finally, make sure that you do not take other ED pills or treatments when using this medicine because it can lead to some negative interactions. **ARE THERE ANY SIDE EFFECTS THAT COME WITH DAILY USE?** There are no special side effects from taking Cialis on a daily basis, and it is also not addictive. Nevertheless, it is vital to keep in mind that even though you are taking the drug in small doses every day, it does not mean that you are immune from the side effects that have been reported from taking tadalafil. The most common ones include headache, muscle aches, indigestion and lumbar pain. However, even these common side effects are extremely rare when Cialis is taken at a dosage of 2.5 mg.
