Precautions This pharmaceutical product should be prescribed with extreme caution to patients with cardiovascular system disorder, for whom any physical, including sexual is a potential risk and threat to health and life. It is important to remember that the risk of complications during intimacy in such a group of patients is much higher. Risk factors include myocardial infarction, which was three months before, unstable angina, or angina, which occurs during sexual activity, as well as a stroke which had taken place less than 6 months ago. Serious risk factors include uncontrolled elevated blood pressure, uncontrolled irregular heartbeat, hypotension. With caution, this medication should be prescribed to those individuals who prone to priapism, suffering from leukemia, penis deformities, Peyronie's disease, and sickle cell anemia, as well as cavernous fibrosis. Administration of PDE-5 inhibitors can lead to priapism development. If an erection persists for 4 hours and longer, you have to seek for medical advice. Late treatment of priapism provokes the penis tissues violation resulting in long-term potency loss. In no case the Cialis Soft should be combined with other medications aimed at potency restoration. At the same time the drug can be combined with Dapoxetine containing medications aimed at sexual intercourse prolongation and ejaculation restoration. Dosage It has to be noted that, despite its soft effect and relative harmless the drug treatment course should be started only after consultation with a doctor. The specialist will give not only competently advise, but recommend (and then, if necessary, adjust) the correct dosage. For men of average weight without obvious ailments, it is usually recommended to use 20 mg of Tadalafil (i.e. 1 pill of Cialis Soft). Those patients who weighing more than 100 kg can be recommended to use a larger dosage but only after visiting a physician. If a man is just starting to take this medication and is not aware of the erectile dysfunction severity has to start using only 1/2 tablet (i.e. 10 mg of Tadalafil). Sometimes Cialis Soft is used by men with healthy potency, seeking to get brighter sensations from intimacy. This product really has such a property. To achieve these new sensations they can use 1/4 (i.e. 5 mg of Tadalafil). This is an absolutely safe dosage of the drug. How to take? Before taking the drug, please carefully read the instructions that are attached to each package of Cialis Soft. Usually the daily amount of the substance is 1 tablet, which should be dissolved at least half an hour before sexual intercourse. In order to get the pronounced of the pill effect it must be dissolved under the tongue. It is not recommended to wash down the pills with juices (especially grapefruit), tea, coffee, mineral water. The consumption of high-calorie food does not affect the speed and level of the active ingredient effectiveness that is why this pill can be used regardless of the food. The time of the medication use during a day also has

no effect on the effectiveness of the agent, which means that it can be taken at any time. However, it should be remembered that the drug should be taken with special caution in case you have heart problems, pressure “jumps”, or you are prone to allergic reactions. Side-effects Tadalafil has vasodilating properties, which can cause a transient decrease in blood pressure. Before prescribing the medicine, the doctor assesses all the perceived risks of negative effects. Using the drug according to the instructions and after consultation with the doctor can reduce the possibility of side effects to a minimum. Among the short-term health problems after taking Cialis Soft are as follows: slight redness on the body; back pain; red eyes; nausea, diarrhea; stuffy nose; migraine. Overdose It is strictly forbidden to use the agent in the amount exceeding 20 mg by men with a standard weight (less than 100 kg) without consultation with a doctor. Such a significant amount will not result in a further sexual power improvement. Instead it can result in a manifestation of painful side effects and harm to your wellbeing. We recommend you to be prudent and use only recommended drug dosage. Interactions Concurrent use of any doses and forms of Cialis Soft and organic nitrates containing medications is strictly contraindicated. These are drugs that contain nitroglycerin, isosorbide mononitrate, dinitrate (aerosols, ointments, plasters, pastes, pills for dissolution under the tongue). Alcohol interaction Usually taking this agent does not result in blood pressure drops in healthy patients, as well as it does not change the number of myocardium contractions. Numerous studies have also evidenced that this medication does not affect the spermatogenic processes including the seminal fluid qualitative properties; also it does not change the hormones and androgens levels. The question is if it can be used with alcohol? As for alcohol, its main substance is ethanol, which is the strongest toxin that adversely affects all organic structures. Strong beverages provoke toxic poisoning of the body, resulting in biochemical and physiological disorders in its functioning. Despite the fact that everyone is aware of such effect of alcohol, many are not afraid for their health and drink alcohol. However ethanol adversely affects male’s reproduction system. Is this product compatible with ethanol? In general, studies show that the compatibility of spirits with Cialis is possible which is considered a very significant advantage of the drug. If alcohol is used in moderate doses, it will not adversely affect the therapeutic effect of Cialis. At the same time it ought to state that if a man is not moderate in alcohol consumption, then the drug will never be effective in him. Furthermore, lack of the drug effectiveness does not mean the lack of negative effects on the body. If this combination is repeated at times, a negative reaction may not be, however, in case of regular co-administration of Cialis with strong beverages the consequences may become unpredictable. Reviews Tom: Today in the market there are a lot of remedies aimed at potency improvement. I have already tried some. After consultation with the doctor I bought Cialis Soft. I liked the taste and speed of action. In addition, my erection pleased me and my girlfriend. Ken: This is pretty good drug with no particular side effects. It copes with sexual disorder, strengthens the potency and has rather good advantage – it is compatible with alcohol. However it can cause headaches sometimes, but this is very rare. Basically there are more pluses than minuses and it acts faster and longer, so you can try. Dan: When the problem of potency disorder affected me personally, I was in shock that this happened to me. I went to the doctor and, upon his recommendation, tried Cialis Soft. I liked that this is a mouth dissolving tablet with a pleasant taste. Charles: Of all the generics, I consider that Cialis Soft is definitely the best. Firstly, it acts in the same way as Viagra, but time of its effectiveness is 2 days! You take a pill on Friday and all weekend you feel like 20 years old, even spontaneous erections can appear. Secondly, it simply has no side effects; they are completely absent, at least for me. And in the third it can be taken with alcohol, which I consider to be important.
