### Description

**Side Effects** Temporary burning, stinging, dryness in the nose, runny nose, and sneezing may occur. If any of these effects last or get worse, tell your doctor or pharmacist promptly. If your doctor has directed you to use this medication, remember that your doctor has judged that the benefit to you is greater than the risk of side effects. Many people using this medication do not have serious side effects. Tell your doctor right away if you have any serious side effects, including: slow/fast/pounding heartbeat, dizziness, nausea, headache, mental/mood changes, trouble sleeping, shaking (tremors), unusual sweating, unusual weakness. A very serious allergic reaction to this drug is rare. However, get medical help right away if you notice any symptoms of a serious allergic reaction, including: rash, itching/swelling (especially of the face/tongue/throat), severe dizziness, trouble breathing. This is not a complete list of possible side effects. If you notice other effects not listed above, contact your doctor or pharmacist. In the US – Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088 or at [www.fda.gov/medwatch](http://www.fda.gov/medwatch). In Canada – Call your doctor for medical advice about side effects. You may report side effects to Health Canada at 1-866-234-2345. **Uses** This medication is used for temporary relief of congestion in the nose caused by various conditions including the common cold, sinusitis, hay fever, and allergies. It works by narrowing the blood vessels in the nose area, reducing swelling and congestion. **How to use Ephrine NOSE Drops** Use this medication in the nose as directed. Follow all directions on the product package, or use as directed by your doctor. If you have any questions, ask your doctor or pharmacist. To apply nasal drops, wash your hands first. To avoid contamination, do not touch the dropper tip or let it touch your nose or any other surface. If needed, have another person place the drops in your nose. Gently blow your nose before using this drug. Tilt your head back while sitting on a chair or lying down. Hold the dropper over the affected nostril and apply the directed number of drops. Keep your head tilted for a few minutes. Repeat these steps with the other nostril if needed. Do not swallow the medication if it drips into the throat. This medication provides only temporary relief. Do not use more medication or use it more often or for longer than directed because doing so may increase the risk of side effects. Also, do not use this medication for more than 3 days because doing so may cause a condition called rebound congestion. Symptoms of rebound congestion include long-term redness and swelling inside the nose and increased runny nose. If this occurs, stop using this medication and consult your doctor or pharmacist. Inform your doctor if your condition gets worse or lasts after 3 days. **Precautions** Before using this nasal decongestant, tell your doctor or pharmacist if you are allergic to it; or to other sympathomimetics (such as pseudoephedrine); or if you

have any other allergies. This product may contain inactive ingredients, which can cause allergic reactions or other problems. Talk to your pharmacist for more details. If you have any of the following health problems, consult your doctor or pharmacist before using this product: heart/blood vessel disease (such as coronary artery disease), overactive thyroid (hyperthyroidism), diabetes, high blood pressure, difficulty urinating (due to enlarged prostate). Before having surgery, tell your doctor or dentist about all the products you use (including prescription drugs, nonprescription drugs, and herbal products). Children may be more sensitive to the side effects of this drug. Check the product package or consult with your doctor or pharmacist about whether these nasal drops can be used by children. During pregnancy, this medication should be used only when clearly needed. Discuss the risks and benefits with your doctor. It is unknown if this drug passes into breast milk. Consult your doctor before breast-feeding. Interactions Drug interactions may change how your medications work or increase your risk for serious side effects. This document does not contain all possible drug interactions. Keep a list of all the products you use (including prescription/nonprescription drugs and herbal products) and share it with your doctor and pharmacist. Do not start, stop, or change the dosage of any medicines without your doctor's approval. Taking MAO inhibitors with this medication may cause a serious (possibly fatal) drug interaction. Avoid taking MAO inhibitors (isocarboxazid, linezolid, metaxalone, methylene blue, moclobemide, phenelzine, procarbazine, rasagiline, safinamide, selegiline, tranylcypromine) during treatment with this medication. Most MAO inhibitors should also not be taken for two weeks before treatment with this medication. Ask your doctor when to start or stop taking this medication. Does Ephrine NOSE Drops interact with other drugs you are taking? Enter your medication into the iMedix interaction checker Overdose If someone has overdosed and has serious symptoms such as passing out or trouble breathing, call 911. Otherwise, call a poison control center right away. US residents can call their local poison control center at 1-800-222-1222. Canada residents can call a provincial poison control center. Symptoms of overdose may include: drowsiness, slow heartbeat, dizziness, fainting. Do not share this medication with others. Use of this container by more than one person may spread infection. There are many nasal decongestants available, many without a prescription. Talk with your doctor or pharmacist about which product is best for you. Not applicable. Refer to storage information printed on the package. Protect from heat and light. Keep all medications away from children and pets. Do not flush medications down the toilet or pour them into a drain unless instructed to do so. Properly discard this product when it is expired or no longer needed. Consult your pharmacist or local waste disposal company.
