Description

Side Effects Constipation, diarrhea, or upset stomach may occur. These effects are usually temporary and may disappear as your body adjusts to this medication. If any of these effects last or get worse, tell your doctor or pharmacist promptly. Iron may cause your stools to turn black, which is not harmful. If your doctor has prescribed this medication, remember that your doctor has judged that the benefit to you is greater than the risk of side effects. Many people using this medication do not have serious side effects. A very serious allergic reaction to this drug is rare. However, get medical help right away if you notice any symptoms of a serious allergic reaction, including: rash, itching/swelling (especially of the face/tongue/throat), severe dizziness, trouble breathing. This is not a complete list of possible side effects. If you notice other effects not listed above, contact your doctor or pharmacist. In the US – Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088 or at www.fda.gov/medwatch. In Canada – Call your doctor for medical advice about side effects. You may report side effects to Health Canada at 1-866-234-2345. **Uses** This medication is an iron supplement used to treat or prevent low blood levels of iron (such as those caused by anemia or during pregnancy). Ascorbic acid (vitamin C) improves the absorption of iron from the stomach. **How to use Integra** Take this medication by mouth, usually once daily or as directed by your doctor. This medication is best taken on an empty stomach 1 hour before or 2 hours after meals. If stomach upset occurs, you may take this medication with food. Avoid taking antacids, dairy products, tea, or coffee within 2 hours before or after this medication because they will decrease its effectiveness. Take with a full glass of water (8 ounces or 240 milliliters) unless your doctor directs you otherwise. Do not lie down for at least 10 minutes after taking this medication. If you are taking a liquid form of this medication, carefully measure the dose using a special measuring device/spoon. Do not use a household spoon because you may not get the correct dose. Mix your dose in a glass of water or juice, and drink the mixture through a straw to prevent staining the teeth. If your liquid form is to be given by dropper, the dose may be placed well back on the tongue and followed with water or juice. If your liquid form is a suspension, shake the bottle well before each dose. Use this medication regularly in order to get the most benefit from it. To help you remember, take it at the same time each day. **Warnings** Accidental overdose of iron-containing products is a leading cause of fatal poisoning in children under 6 years of age. Keep this product out of reach of children. If overdose does occur, get medical help right away or call a poison control center. **Precautions** Before taking this medication, tell your doctor or pharmacist if you are allergic to it; or if you have any other allergies. This product may contain inactive ingredients, which can cause allergic reactions or other problems. Talk to your pharmacist

for more details. Before taking this medication, tell your doctor or pharmacist your medical history, especially of: certain metabolic disorders (such as hemochromatosis, hemosiderosis), use/abuse of alcohol, stomach/intestinal problems (such as ulcers, colitis). If your particular brand of iron supplement also contains folic acid, be sure to tell your doctor or pharmacist if you have vitamin B12 deficiency (pernicious anemia) before taking it. Before having surgery, tell your doctor or dentist about all the products you use (including prescription drugs, nonprescription drugs, and herbal products). During pregnancy, this medication should be used only when clearly needed. Discuss the risks and benefits with your doctor. This medication passes into breast milk. Consult your doctor before breast-feeding. Overdose If someone has overdosed and has serious symptoms such as passing out or trouble breathing, call 911. Otherwise, call a poison control center right away. US residents can call their local poison control center at 1-800-222-1222. Canada residents can call a provincial poison control center. Symptoms of overdose may include: stomach pain, nausea, vomiting, diarrhea. Do not share this medication with others. Lab and/or medical tests (such as complete blood count) may be done while you are taking this product. Keep all medical and lab appointments. Consult your doctor for more details. There are many iron supplement products available. Some can be purchased without a prescription. Some brands may also contain other ingredients (such as folic acid, niacin). Consult your doctor or pharmacist for more details. This medication is not a substitute for a proper diet. It is important to maintain a well-balanced diet. Foods rich in iron include beans, nuts, asparagus, oatmeal, red meat, dried peaches, and pork liver. If you miss a dose, take it as soon as you remember. If it is near the time of the next dose, skip the missed dose. Take your next dose at the regular time. Do not double the dose to catch up. Different brands of this medication have different storage needs. Check the product package for instructions on how to store your brand, or ask your pharmacist. Keep all medications away from children and pets. Do not flush medications down the toilet or pour them into a drain unless instructed to do so. Properly discard this product when it is expired or no longer needed. Consult your pharmacist or local waste disposal company. Interactions Drug interactions may change how your medications work or increase your risk for serious side effects. This document does not contain all possible drug interactions. Keep a list of all the products you use (including prescription/nonprescription drugs and herbal products) and share it with your doctor and pharmacist. Do not start, stop, or change the dosage of any medicines without your doctor's approval. This product can decrease the absorption of other drugs such as bisphosphonates (for example, alendronate), levodopa, penicillamine, quinolone antibiotics (for example, ciprofloxacin, levofloxacin), thyroid medications (for example, levothyroxine), and tetracycline antibiotics (such as amoxil, zithromax, flagyl, ciprofloxacin). Separate your doses of these medications as far as possible from your doses of this product. Ask your doctor or pharmacist about how long you should wait between doses and for help finding a dosing schedule that will work with all your medications. This medication may interfere with certain lab tests (such as tests for blood in the stools), possibly causing false test results. Make sure lab personnel and all your doctors know you use this drug.
