Description

Uses & Effectiveness Overview Mezereon (*Daphne mezereum*) is a shrub. The bark has been used as medicine, but it can be toxic and is no longer commonly used. Mezereon has been used for headache, toothache, joint pain, and other purposes, but there is no good scientific evidence to support any use. Mezereon may also be unsafe. Mezereon, also known as *Daphne mezereum*, is a poisonous plant native to Europe and Asia. Despite its toxic nature, extracts from mezereon have been used medicinally to relieve arthritis pain, treat skin conditions, and even kill parasites. However, its therapeutic benefits should be cautiously explored under professional guidance due to its potential side effects.

Side Effects When taken by mouth: Mezereon is likely unsafe. It can cause many serious side effects including redness and swelling of the mouth, severe diarrhea, increased heart rate, spasms, and death. When applied to the skin: Mezereon is possibly unsafe. It can cause red, painful swelling of the skin, blisters, and permanent skin damage.

Interactions We currently have no information for MEZEREON overview. **Special Precautions and Warnings**

When taken by mouth: Mezereon is likely unsafe. It can cause many serious side effects including redness and swelling of the mouth, severe diarrhea, increased heart rate, spasms, and death. **When applied to the skin:** Mezereon is possibly unsafe. It can cause red, painful swelling of the skin, blisters, and permanent skin damage.

Pregnancy and breast-feeding: It is likely unsafe to take mezereon by mouth or apply it to the skin when pregnant or breast-feeding. **Avoid use.**

Dosing There isn't enough reliable information to know what an appropriate dose of mezereon might be. Keep in mind that natural products are not always necessarily safe and dosages can be important. Be sure to follow relevant directions on product labels and consult a healthcare professional before using.
