Description

Side Effects Burning, stinging, or redness at the application site may occur. If any of these effects last or get worse, tell your doctor or pharmacist promptly. If your doctor has directed you to use this medication, remember that your doctor has judged that the benefit to you is greater than the risk of side effects. Many people using this medication do not have serious side effects. Rarely, this medication can be absorbed through the skin and cause side effects. Stop using this medication and tell your doctor right away if you have any serious side effects, including: unwanted facial/body hair, dizziness, fast/irregular heartbeat, fainting, chest pain, swelling of hands/feet, unusual weight gain, tiredness, difficulty breathing especially when lying down. A very serious allergic reaction to this drug is rare. However, get medical help right away if you notice any symptoms of a serious allergic reaction, including: rash, itching/swelling (especially of the face/tongue/throat), severe dizziness, trouble breathing. This is not a complete list of possible side effects. If you notice other effects not listed above, contact your doctor or pharmacist. In the US – Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088 or at www.fda.gov/medwatch. In Canada – Call your doctor for medical advice about side effects. You may report side effects to Health Canada at 1-866-234-2345. Uses Minoxidil solution and foam are used to help hair growth in the treatment of male pattern baldness. It is not used for baldness at the front of the scalp or receding hairline in men. The foam and 2 percent minoxidil solution is also used to help hair growth in women with thinning hair. Minoxidil belongs to a class of drugs known as vasodilators. It is not known how minoxidil causes hair growth. This medication is not used for sudden/patchy hair loss, unexplained hair loss (for example, if you have no family history of hair loss), or hair loss after giving birth. Do not use this product if you are 18 years old or younger. How to use Rogaine 2 % Topical Solution Read and follow all directions on the product package before using this product. If you have any questions, ask your doctor or pharmacist. Clean and dry the scalp area before applying the medication. You may apply this product to damp hair. To use the solution, fill the applicator with 1 milliliter of medication (to the 1 milliliter line), or use 20 drops. Part your hair in the area of thinning and apply the solution evenly to the affected area of the scalp. Gently rub in. Allow the solution to dry completely before using other styling products (such as gels, mousse) or before going to bed. To use the foam, rinse your hands in cold water and dry well. Apply about 1/2 capful of foam to the scalp and rub in gently. Allow the foam to dry completely before styling or going to bed. If scalp irritation is a problem, you may need to avoid using minoxidil on the same days that you have your hair colored or chemically treated (for example, permed). Do not use on other parts of the body unless directed by

your doctor. Do not use on skin that is red, painful, irritated, scraped, cut, or infected. Wash hands thoroughly after application. Avoid getting the medication in your eyes. If this occurs, rinse your eyes with large amounts of cool water. Do not use this medication more often, apply more of it than as directed, or apply it to an irritated or sunburned scalp. Doing so can cause the drug to be absorbed into your body and result in serious side effects. This product may contain alcohol and can be irritating and drying to the scalp. Ask your doctor or pharmacist how to use this product safely. It takes time for hair to regrow. Most people need to use this medication regularly for 4 months to see benefit. This medication must be used continuously to maintain hair growth. If your condition does not improve or worsens after using this medication for 4 to 6 months, or if you think you may have a serious medical problem, tell your doctor. Precautions Before using minoxidil, tell your doctor or pharmacist if you are allergic to it; or if you have any other allergies. This product may contain inactive ingredients, which can cause allergic reactions or other problems. Talk to your pharmacist for more details. If you have any of the following health problems, consult your doctor or pharmacist before using this product: diseases of the scalp (such as eczema, infection, cuts), heart problems (such as chest pain, heart attack, heart failure), kidney disease, liver disease. During pregnancy, this product should be used only when clearly needed. Discuss the risks and benefits with your doctor. It is unknown if this drug passes into breast milk. Consult your doctor before breast-feeding. Overdose This medicine may be harmful if swallowed. If someone has overdosed and has serious symptoms such as passing out or trouble breathing, call 911. Otherwise, call a poison control center right away. US residents can call their local poison control center at 1-800-222-1222. Canada residents can call a provincial poison control center. Symptoms of overdose may include: dizziness, drowsiness, fainting, flushing. Keep all medical and lab appointments. If you miss a dose, skip the missed dose. Use your next dose at the regular time. Do not double the dose to catch up. Store at room temperature away from heat. This product is flammable. Keep it away from fire, and avoid open flame after treatment until the medication has completely dried. Keep all medications away from children and pets. Do not flush medications down the toilet or pour them into a drain unless instructed to do so. Properly discard this product when it is expired or no longer needed. Consult your pharmacist or local waste disposal company. Interactions Drug interactions may change how your medications work or increase your risk for serious side effects. This document does not contain all possible drug interactions. Keep a list of all the products you use (including prescription/nonprescription drugs and herbal products) and share it with your doctor and pharmacist. Do not start, stop, or change the dosage of any medicines without your doctor's approval. Some products that may interact with this drug include: drugs for high blood pressure (such as guanethidine), drugs that interact with alcohol (such as disulfiram, metronidazole).
