### Description

Side Effects Nervousness, dizziness, shaking (tremor), trouble sleeping, headache, nausea, dry mouth, cough, sore throat, or runny nose may occur. If any of these effects last or get worse, tell your doctor or pharmacist promptly. Remember that this medication has been prescribed because your doctor has judged that the benefit to you is greater than the risk of side effects. Many people using this medication do not have serious side effects. This medication may raise your blood pressure. Check your blood pressure regularly and tell your doctor if the results are high. Tell your doctor right away if you have any serious side effects, including: fast/pounding heartbeat. Get medical help right away if you have any very serious side effects, including: chest pain, irregular heartbeat, rapid breathing, confusion. Rarely, this medication has caused severe (rarely fatal), sudden worsening of breathing problems/asthma (paradoxical bronchospasm). If you experience sudden wheezing, get medical help right away. A very serious allergic reaction to this drug is rare. However, get medical help right away if you notice any symptoms of a serious allergic reaction, including: rash, itching/swelling (especially of the face/tongue/throat), severe dizziness, trouble breathing. This is not a complete list of possible side effects. If you notice other effects not listed above, contact your doctor or pharmacist. What is Xopenex used for? Xopenex is used to treat and prevent bronchospasm in people with reversible obstructive airway disease, such as asthma. How should Xopenex be used? Xopenex should be used exactly as prescribed by your doctor. This includes the method of inhalation, frequency of doses, and proper use of the nebulizer or inhaler. Are there age restrictions for using Xopenex? Xopenex inhalers are not recommended for children younger than 4 years old, and the nebulizer solution is not for children under 6 years old. What should I do if I miss a dose? If you miss a dose of Xopenex, take it as soon as you remember. However, if it's nearly time for your next dose, skip the missed dose and continue with your regular schedule. Don't double up doses. Can Xopenex be used during pregnancy or while breastfeeding? The effects of Xopenex on an unborn baby or a nursing infant are not fully known. Inform your doctor if you are pregnant, planning to become pregnant, or breastfeeding. What are the possible side effects of Xopenex? Common side effects of Xopenex may include dizziness, nervousness, tremors, runny nose, sore throat, chest pain, and irregular heartbeats. Seek immediate medical attention for signs of allergic reactions or worsening asthma symptoms. Are there any known drug interactions with Xopenex? Xopenex can interact with other medications, especially heart or blood pressure medications, diuretics, antidepressants, and other bronchodilators. Always inform your doctor about all the medications you are currently taking. What are the guidelines for storing Xopenex? Store the Xopenex inhaler at room temperature, away from extreme heat and

cold. The nebulizer solution should also be stored at room temperature, protected from light and moisture. What should be avoided while using Xopenex?
