### Description

Side Effects Stinging/burning of the eyes for 1 to 2 minutes may occur when this medication is applied. Headache may also occur during treatment with this medication. If any of these effects last or get worse, notify your doctor or pharmacist promptly. Remember that this medication has been prescribed because your doctor has judged that the benefit to you is greater than the risk of side effects. Many people using this medication do not have serious side effects. Use of this medication for prolonged/repeated periods may result in a new fungal eye infection and may increase your risk for other eye problems (such as glaucoma, cataracts, delayed wound healing). Do not use this medication for longer than prescribed. Tell your doctor right away if any of these unlikely but serious side effects occur: new or worsening eye symptoms (such as discharge, swelling, redness), vision problems, eye pain. A very serious allergic reaction to this drug is rare. However, get medical help right away if you notice any symptoms of a serious allergic reaction, including: rash, itching/swelling (especially of the face/tongue/throat), severe dizziness, trouble breathing. This is not a complete list of possible side effects. If you notice other effects not listed above, contact your doctor or pharmacist. In the US – Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088 or at [www.fda.gov/medwatch](http://www.fda.gov/medwatch). In Canada – Call your doctor for medical advice about side effects. You may report side effects to Health Canada at 1-866-234-2345. Uses This medication is used to treat conditions involving swelling (inflammation) of the eyes and to treat or prevent bacterial eye infections. This product contains tobramycin, an antibiotic that works by stopping the growth of bacteria. It also contains loteprednol, an anti-inflammatory corticosteroid that works by reducing swelling, redness, and itching. This medication treats/prevents only bacterial eye infections. It will not work for other types of eye infections and may worsen them (such as infections caused by viruses, fungi, mycobacteria). Unnecessary use or overuse of any antibiotic can lead to its decreased effectiveness. How to use Zylet Suspension, Drops (Final Dose Form) This medication is applied to the eye(s) as directed by your doctor. To apply eye drops, wash your hands first. To avoid contamination, do not touch the dropper tip or let it touch your eye or any other surface. Shake the bottle well before each dose. Do not wear contact lenses while you are using this medicine. Sterilize contact lenses according to manufacturer's directions, and check with your doctor before you begin using them again. Tilt your head back, look upward, and pull down the lower eyelid to make a pouch. Hold the dropper directly over your eye and place one drop into the pouch. Look downward and gently close your eyes for 1 to 2 minutes. Place one finger at the corner of your eye (near the nose) and apply gentle pressure. This will prevent the medication from draining out. Try not to blink and do not rub your eye.

Repeat these steps if your dose is for more than 1 drop and for your other eye if so directed. Repeat as often as directed by your doctor. Your dosage is based on your medical condition and response to therapy. Do not rinse the dropper. Replace the dropper cap after each use. If you are using another kind of eye medication (such as drops or ointments), wait at least 5 minutes before applying other medications. Use eye drops before eye ointments to allow the eye drops to enter the eye. Do not use this medication more often than prescribed or for longer than 2 weeks unless directed by your doctor. Use this medication regularly in order to get the most benefit from it. To help you remember, use it at the same times each day. Continue to use this medication for the full time prescribed, even if symptoms disappear after a few days. Stopping the medication too soon may allow bacteria to continue to grow, which may result in a return of the infection. Inform your doctor if your condition does not improve in 2 days. Precautions Before using this medication, tell your doctor or pharmacist if you are allergic to tobramycin or loteprednol; or to aminoglycoside antibiotics (such as gentamicin, neomycin); or to corticosteroids (such as hydrocortisone, prednisone); or if you have any other allergies. This product may contain inactive ingredients (such as preservatives like benzalkonium chloride), which can cause allergic reactions or other problems. Talk to your pharmacist for more details. Before using this medication, tell your doctor or pharmacist your medical history, especially of: other eye problems (such as glaucoma). After you apply this drug, your vision may become temporarily blurred or unstable. Do not drive, use machinery, or do any activity that requires clear vision until you can do it safely. During pregnancy, this medication should be used only when clearly needed. Discuss the risks and benefits with your doctor. It is unknown if this drug passes into breast milk. Consult your doctor before breast-feeding. Overdose This medicine may be harmful if swallowed. If someone has overdosed and has serious symptoms such as passing out or trouble breathing, call 911. Otherwise, call a poison control center right away. US residents can call their local poison control center at 1-800-222-1222. Canada residents can call a provincial poison control center. Do not share this medication with others. This medication has been prescribed for your current condition only. Throw away the unused medication after treatment is completed. Do not use it later for another infection unless your doctor tells you to. If you use this medication for 10 days or longer, eye exams should be performed regularly to monitor your progress or check for side effects. Consult your doctor for more details. If you miss a dose, use it as soon as you remember. If it is near the time of the next dose, skip the missed dose. Use your next dose at the regular time. Do not double the dose to catch up. Store the bottle upright at room temperature. Do not freeze. Throw away this medication and do not use it if the solution turns brown or cloudy or contains particles. Keep all medications away from children and pets. Do not flush medications down the toilet or pour them into a drain unless instructed to do so. Properly discard this product when it is expired or no longer needed. Consult your pharmacist or local waste disposal company. Interactions Drug interactions may change how your medications work or increase your risk for serious side effects. This document does not contain all possible drug interactions. Keep a list of all the products you use (including prescription/nonprescription drugs and herbal products) and share it with your doctor and pharmacist. Do not start, stop, or change the dosage of any medicines without your doctor's approval.
